

# National Program of Cancer Registries (NPCR) CRS PLUS

## Registry Plus Software for Cancer Registries

### Brief Description

CRS Plus (Central Registry System Plus) is the main central registry database program in the Registry Plus suite. CRS Plus links incoming abstracts with the existing database, using software-assisted consolidation into patient, cancer, and facility tables. CRS Plus allows side-by-side displays and automated comparisons of incoming and stored data. CRS Plus updates the tracking system with processing milestones for each abstract. Other features of CRS Plus include management reports and exports records in NAACCR (North American Association of Central Cancer Registries) format. Preparation of files for national calls for data is automated.

### Updates

- Updated to support NAACCR version 10.1 record layout
- Incorporated Collaborative Staging calculation
- Updated standard extracts for the latest data submissions standards
- Added functionality to show updates history of cases

Cancer Registries  
Registry Plus™ Software

### Future Plans

- Update to NAACCR 11 standards will be incorporated into this version
- Add more management reports
- Process records from secondary sources
- Implement automated central sequence number logic
- A professional usability application evaluation will be done, and the user interface will be enhanced to maximize usability
